#### Abstract

f象 Persons requiring general information on the subject can address their applications to Wm. R. Princb, who has long made the culiture of the Strawberry a specific object of his attention.

ns All ordes should be sent direct by mail. The Plants, \&c., are all labeled and packed in a superior manner. Strawberry Plants can be packed so as to be sent safely at any season. The best periods for planting, are March and April, an ugust 2 toth to November. We puddle roots, and do not loose one per cent. Parcels can be sent by Mail, if desirtd, at 8 cents per lb. If purchasers do not specify, we send by Mail or Express. No less than a dozen are sold of dny variety, unless otherwise stated in the Catalogue. Persons ordering will please specify the Edition of the Catalogue. Terms, Cash with the order, or collected by Express, on delivery.
nos Our Catalogues of Fruit and Ornamental Trees, Shrubs, Plants, Grapes, Bulbous Roots, Froonies, Green House Plants, Seeds, \&c., will be sent to applicants who enclose stamps. Also, the Wholesale Catalogue for Nurseries.
The 250 varieties embraced in our entire collection of Strawberries, including the newest Foreign Varieties, are fully described in communications from War. R. Prince, in the Patent Office Report for 1861, and in various periodicals. Another elaborate article on the Fragaria Family will be found in ${ }^{\text {² }}$ the Transactions of the American Pomological Society, for 1862 ; and one more comprehensive will be found in the forthcoming Transactions of the American Institute. We therefore, deem it only necessary here to describe the New Varieties. The public taste has become so awakened to the appreciation of the sweet, high-flavored and perfumed varieties of the Strawberry, that such berries as the Wilson, Downer, Austin, \&cc., will not be tolerated by persons familiar with good fruit; and the new varieties presented to us, during the past three yeais, as Seedlings from the Wilson, very large, but sour and insipid, ought to satisfy every amateur,

that when desirous of obtaining sweet and fine-flavored Seedlings, we must select the seed from parents possessing these qualities. We now offer a few of our superior New Seedlings with descriptions, and there is not an acid or inferior one among them. Of the following assortment, 40 of the most splendid varieties, designated by an asterisk (\%), were originated in our own Nurseries, and selected from thousands of seedlings. Several of these have white flesh, and there is not one of them that is not superior in flavor to Russell's Prolific, and to all the Wilson Seedlings recently announced. The American Varieties possess the advantage of great hardihood and productiveness, and are suitable for field culture. Hermaphrodite Varieties should be grown in rows or hills, but Pistiliates may be allowed to cover the entire ground. The latter will require one-tenth of Hermaphrodites to fertilize them, which can be grown in distinct beds, and as these are also fruit bearing, no space is lost, as has been alleged. If the beds are within 50 feet of each other, the impregnation will be perfected. It is a positive normal fact, based on physical structure, that the Pistillate Varieties of any species of the Strawberry, will produce a crop fifty per cent. greater per acre than the Hermaphrodites can possibly do, as has been fully demonstrated in an article on the Fragraria Family, read before the American Institute, and to be published in their forthcoming Transactions. Any person who ignores the natural fistence of Pistillates, furnishes us an evidence of his ignorance of Nature's facts and purposes; and any one who will devote ten minutes to a search in the forest can obtain proof of the fact. In field culture, when planted in rows 2 by $2 \frac{1}{2}$ feet, it requires 9,000 plants to an acre. H, denotes hermaphrodites$P$, pistillates.

Whe invite all Amateurs to inspect our collection at the fruiting season, it being the most extensive and at the same ime the most select one in our country and unequaled in Europe, and the only one where all the species of the Strawberry family are assembled. Amateurs can here form a correct judgment as to the average size and productiveness of the Varieties, whereas the exhibitions of selected and often of misnamed berries are deceptive, and result in disappointments. The precision and accuracy in our gardens is such, that we have offered $\$ 100$, if one erroneous plant could be found. We refer to Professor Huntsman, our best-informed amateur, tódoan W. Chambers, Esq., Secretary of the American Institute, and to Dr. Tremble, of Newark, N. J., as to the great superiority of our collection over all others, and asto its systematic arrangement. We caution the public against such acts as have been practiced with the Bartlett and others, by giving new names to old varieties; by selling Lennig's White under three names as if distinct, and also forcing on the public such comparatively poor varieties as will be found named in our Rejected List, at page 12.

## NORTH AMERICAN VARIETiEs.

1. Abington, H (Kohl), a Pennsylvania seedling, from the Wilson.
Albion White, see Lennig's White.
Alice Maud, worthless. Rejected by Pom. Society.
2. Amateur (J. A. Pain), P, a nerv seedling.........

Nero, inferior. Rejected.
47. Newark Prolific, or Green Prolific (Boyden), P, large, scarlet, rounded, beautiful, fair flavor, juicy, very productive, a showy market berry. .
48. Newland or Chilian, H, medium to large, conical, deep scarlet, very sweet, rich, juicy, excellent flavor, long bearing, firm for market, strong upright peduncles.
49. Ophelia, H. large, splendid, obovate, a seedling of Scarle tagnate, and its best fertilizer
Orange Prolific, very acid. Rejected.
50. "Pauline, P , new, very lârge, obovate, bright scarlet, beautiful, very juicy, acidulate, good flavor, rather late ; vigorous, productive.
51. PPerfumed Cone, P , medium size, exquisite flavor
52. Primate, H, rather large, deep scarlet, very firm for market, very productive.

English, French, and Belgian Varieties.
These are all of the Pine family (Fragaria Grandiflora) up to No. 183, and the most of them are of Belgian origin, and of a much more hardy character than the English varieties which have been heretofore introduced and discarded. They produce very large and beautiful berries, with white, and some with rosy flesh, and are remarkable for their sweetness, exquisite flavor, and perfume. The Triomphe de Gand has become most generally known, but there are numerous varieties greatly superior to it in sweetness and flavor. Being of Tropical parentage, the Pine family require a warm location, a strong, rich soil, and to be cultivated in rows or stools, and kept free from runners. They are well worthy the special attention of amateurs. All these are Hermaphrodites.
131. Ambrosia (Nicholson), very large, glossy crimson, very sweet, mulberry flavor

100
132. A. Retemeyer (Jonghe), very large, ovate, vermilion ; flesh salmon, exquisitely sweet
133. Beauty of England (Frewin), very large, oblong, compressed, glossy crimson, sweet, perfumed.

75
134. Bicton White Pine, large, beautiful
135. Bonté de St. Julien (Carre), medium size, crimson, conical, sweet, very juicy, excellent flavor; plant very hardy, productive
136. Caroline, Red or Old Pine, large, bright scarlet, highest flavor, poor bearer .................................
137. Caroline, Rosy White, large, beautiful, very productive, fine flavor
138. Carolina Superba (Kitley), very large, orange scarlet, splendid ; flesh white, very high flavor, late; hybrid Chili
